Abstract (en)

[origin: WO9719680A1] A novel therapeutical use of beta -mimetic agents for preparing a drug suitable for treating or alleviating dysmenorrhoea is disclosed. The pharmaceutical forms used contain 0.1-10 mg of a beta -mimetic agent combined with one or more non-toxic inert excipients or carriers suitable for transmucosal delivery. The beta -mimetic agent may be combined with an antiarrhythmic agent, a bradycardiac agent or an anti-inflammatory agent.
