Abstract (en)

[origin: EP0806162A1] The drawer guide comprises a drawer rail (8) which runs on a U-shape body rail (1). The body rail in the rear end area supports a running roller (11) rolling on a lower guide rib of the body rail and is extendable through a linked support lever (13) over the rear wall of the drawer (5). A slide guide (21) is provided in the rear end area of the fixture flange of the body rail for the support lever pivotable between an upwardly pivoted rest position and a downwardly pivoted, stop-limited work position. The support lever is loaded by a spring (17) in the sense of an upward pivoting movement. The slide guide in the height area of the guide body (24) of the upwardly pivoted support lever has a catchment device (31) for the guide body.
