Abstract (en)  
The bogie consists of a chassis (1) and a cross-member (2) which can pivot about a vertical axis relative to the chassis by means of arms, and is mounted on a support (4). An additional link between the chassis and vehicle body is provided by anti-rock dampers (3) which are regulated to ensure correct functioning of the bogie. An additional anti-rock effort is provided by friction between the cross-member and its supports.

Abstract (fr)  
La présente invention porte sur un bogie moteur comportant un châssis (1) de bogie et une traverse (2), ladite traverse (2) étant susceptible de pivoter autour d'un axe vertical par rapport audit châssis (1) de bogie, ladite traverse (2) prenant appui sur un lisoir (4) et étant maintenue en rotation au moyen de bielles (5) par rapport à une caisse (6) montée sur ledit bogie moteur, une liaison complémentaire étant prévue entre ledit châssis (1) et ladite caisse (6) au moyen d'un amortisseur anti-lacet (3). <IMAGE>
