Abstract (en)

[origin: EP0806359A1] The heat moulding assembly, for the production of blister strips from a packaging strip (10), has a perforation or embossing station (11) and stamping station (23) in fixed positions, and not at right angles to each other. The take-up feed roller (17) is adjustable along an axis (26) so that the gap (X) between the perforation/embossing station (11) and the roller (17) and the gap (Y) between the roller (17) and the stamping station (23) can be altered simultaneously.
