Abstract (en)

[origin: WO9623871A1] Provided is an insecticidal composition comprising an effective amount of a juvenile infective-stage of insecticidal entomopathogenic Heterorhabditis bacteriophora hybrid strain Hb (NJ), or mutants or variants thereof and a biocompatible carrier therefor. The insecticidal compositions provided have improved insecticidal activity compared to known insecticidal compositions containing a known H. bacteriophora nematode HBHP88. Also disclosed is a process for reducing the population of soil-inhabiting insects in soil by applying to a soil locus infected with such insects the above-described insecticidal composition. Additionally, the Hb (NJ) hybrid nematode strain is provided.
