Abstract (en)
[origin: EP0807520A2] The pressure switch is for a press in which the cylinder is fitted relative to the other cylinders with which it operates by eccentric bearings able to turn in the walls of the mounting. An operating device for the bearings is acted on by the pressure switch. There are also stops to set the axial clearance and turning limits of the bearings. There is an operating device on both the A side and the B side of the cylinder (1) for its eccentric bearings (2). There is also an adjustable stop (6,7) on each side for the pressure-setting position of the eccentric bearings, with identical setting drives (5).
