Abstract (en)

Rail bars (1,2) are mutually connected with their end faces in electrically conducting manner by arranging an electrically conducting (6,7,8,9) member on either side of the rail bars. The conducting member (6,7,8,9) is connected clampingly to the rail bar by suitable fixing means (14,5,10), for instance nut-bolt connections, wherein a space results between the rail bars and the connecting plate. This space is filled by means of a curing adhesive (11,12). <IMAGE>
