Abstract (en)  
[origin: WO9624248A1] The invention is related to an antimicrobial composition whose antimicrobial component contains: a) about 50-99.8 weight % of unsubstituted or substituted C1-C4 monocarboxylic acid, and b) about 0.2-30 weight % of the ester or unsubstituted or substituted benzoic acid. The composite of the carboxylic acid and the ester of benzoic acid yields better results than when using, e.g., benzoic acid. The composition according to the invention can also contain a carrier in particle form in which the said antimicrobial component has been absorbed.
