Abstract (en)  
[origin: WO9624323A1] A transfer device for contamination-free transfer of liquids between two containers, each of which has a closure, comprises an alignment device with two adapters, each of which is set on the closure of a container, and a transfer part which has a transfer duct and is detachably mounted in the alignment device. Such a transfer device is improved by making the transfer part separable from the container into which the liquid is transferred. It is economical to produce and safe and easy to handle and allows a reliably contamination free transfer of liquids.
