Abstract (en)
[origin: EP0808592A2] This foam plastic insulating mat (1) rolls-up. It has novel recesses (2) near one end (3) with corresponding stampings (4). The stamping is wider at its free end, and remains joined to the mat at the root (6). This defines a tongue (7), which with the recess (2), forms a fastening. Preferably, the mat is made of closed-cell polyethylene foam, with a density of 20-80 kg/m³.
