Abstract (en)

[origin: EP0808601A2] The cleaning machine has a wiper plate (12). It has a cleaning element at the contact pressure face (23) in at least one connecting area. This is designed so that the cleaning element (2) can be compressed between the pressure face and at least one counter face in a position where it is swivelled away from the wiper plate. The contact pressure face is flat and set substantially perpendicular to the surface of the wiper plate facing the cleaning element. A clamping device (14) is formed for fixing the cleaning element on the wiper plate. The clamping device has a detachable clamping strip (16) interacting with a counter-strip (15).
