Abstract (en)

The web (1) is delivered from a knitting machine to a winding drum (14,14') driven by an axle drive system (13,25-29) whose rotation speed is controlled by sensors (7,9,10) measuring web tension. A take-off roll (15) for the web is located at the position (16) where the web is taken up by the winding drum. The distance between the roll and drum is kept constant by moving them relative to each other along a radial guide. The take-off roll may be guided radially outwards with the incremental diameter of the winding drum. The take-off roll may be mounted on the ends of the rotation arm (17,17') whose length is refined such that the movement of the take-off roll.

Abstract (de)

Vorrichtung zum Aufwickeln einer Wirkwarenbahn (1), die von einer Kettenwirkmaschine zu einem Warenwickel (14) geliefert wird, unter Verwendung eines Achsantriebs, der mittels eines die Warenspannung messenden Sensors (7-10) hinsichtlich seiner Drehzahl geregelt ist. Zum Aufwickeln von Elastikwirkware ist eine in Abstand vom Warenwickel (14) gehaltene, der Auflaufstelle (16) der Warenbahn (1) am Warenwickel (14) benachbarte Ausstreifwalze (15) angeordnet, wobei zur Einhaltung eines im wesentlichen gleichbleibendem Abstandes zwischen Warenwickel (14) und Ausstreifwalze (15) deren Relativ-Verschiebung längs einer Radialführung erfolgt. <IMAGE>
