Abstract (en)
A temporary fencing panel (10) comprising a frame consisting of upright end struts (11) and upper and lower horizontal struts (13,14) and a mesh or wire infill (15) welded or otherwise attached to the frame. Fixed to one upright strut (11) is a pair of horizontally extending plates (20) with aligned bolt receiving apertures (21) such that two adjacent panels (10) may be clamped together by introducing the adjacent upright strut (11) of the next adjacent panel (10) between the two plates (2) and retaining same by means of fixing bolt (22). Such an arrangement avoids the need for clamping means consisting of loose and separate parts.
