Abstract (en)  
[origin: EP0809026A1] The compressor comprises at least one piston (9) which reciprocates in a cylinder (10), a drive shaft (2), and a wobble plate arrangement (30) between the piston (9) and the drive shaft (2). To improve the efficiency and reduce wear, the wobble plate arrangement (30) comprises a swash plate (4), on which a wobble plate (5) is rotatably mounted. Arranged between the wobble plate (5) and the piston is a bearing (7) which allows rotation of the wobble plate relative to the piston (9).
