Abstract (en)
[origin: DE19505190A1] An electronic key for actuating a lock is particularly useful for closure systems of motor vehicles. The housing (1) of the electronic key is shaped as a thin wedge. The narrow end (2) of the wedge is designed to be introduced into the lock and contains the parts that actuate the lock. In addition, the housing has a cavity (7) for receiving the key bit of a key for a mechanical lock.
