Abstract (en)  
[origin: GB2298236A] The door assembly is mounted for hinging movement between a closed position Pc in contact with a door seal 30 and an open position Po. The door assembly comprises a mounting mechanism including a mounting arm 18 having a first end 20 pivotally connected to a support 16 for the door 14 and a second end 24 pivotally connected to the door 14. A second arm 26 is provided for controlling pivotal movement of the door 14 relative to the mounting arm 18. The mounting mechanism includes a closing device comprising a closure member 40 on the support 16 which is movable during closing movement of the door 14 so as to engage a pin 44 on the door 14 prior to the door 14 reaching its fully closed position Pc. Further movement of the door 14 into its closed position Pc then causes the closure member to urge the door 14 against the door seal 30.
