Abstract (en)

[origin: DE19504781C1] The invention concerns a pane guide for a spherically curved window pane which can be lowered in the door shaft of a vehicle door, forms part of a notional enveloping surface which is barrel-shaped along the vehicle's longitudinal axis, and can be introduced in the direction of the vehicle's longitudinal axis through a double-stranded cord window raiser mounted in the door shaft. The guide tracks have a first and a second curvature matching the pane curvature at right angles to the vehicle's direction of motion, so that an additional pivoting motion about a pivoting point (P, P', p", p''') situated at a distance from the leading edge (10r, 10r', 10r'', 10r''') of the pane (1, 1o, 1u, 1', 1'', 1''') along the X-direction, said additional pivoting motion keeping the pane's bottom edge parallel, is superimposed on the sliding motion of the pane (1, 1o, 1u, 1', 1'', 1'''). The notional barrel-shaped enveloping surface (2o, 2u) on which the pane (1, 1o, 1u, 1', 1'', 1''') slides pivots simultaneously in the sliding direction of the pane (1, 1o, 1u, 1', 1'', 1''') and, as the pane slides between the extreme positions, three points on the pane (1, 1o, 1u, 1', 1'', 1''') are always on the barrel-shaped envelope (2o, 2u) which is associated with the pane (1, 1o, 1u, 1', 1'', 1''') in one of the extreme positions.
