Abstract (en)
[origin: WO9625136A1] A transfusion container provided with a drug chamber, a capping member for hermetically sealing the mouth of the drug chamber, and a solvent chamber joined to the bottom of the drug chamber, wherein the drug chamber is provided with a through hole at the bottom thereof and has a protruding piece which hermetically seals the through hole and is movable so as to open the through hole protruding into the drug chamber, while the capping member has an engaging part to be engaged with the tip of the protruding piece and the protruding piece is movable to open the through hole by the rotation of the capping member. This container serves to simplify the process steps and reduce the number of the parts, is ready to dispose of, facilitates mixing the drug with the solvent, and is easy to maintain and handle in hospitals and other facilities.
