Abstract (en)

A dismantling tool consists of a bar (11) with a forked end (2) and cutter (23). The forked end, joined to the bar by a socket (21), has two parallel prongs (24) which are connected to the socket by a central body (22) with a sharpened edge forming the cutter (23). The free end (12) of the bar has a sharpened tip, while a handle (3) projects at right angles to the bar adjacent to the forked end. When in use either end of the bar can be employed to lever off a bumper, using the handle to rotate it or to apply foot pressure. The cutter at the forked end of the tool can be used to cut through flexible connections between the bumper and vehicle bodywork.

Abstract (fr)

Outil pour désolidariser un élément de la caisse d'un véhicule, caractérisé en ce qu'il comprend un manche (11) dont l'une des extrémités porte un élément conformé en fourche (2) muni de moyens de sectionnement (23). <IMAGE>
