Abstract (en)

[origin: EP0810311A1] The assembly to produce fringes with braided heads has a shaft (30) for the fringe crochet hook (19) which can be disconnected from its drive (32). The end of the shaft, away from the crochet hook (19), has a heel (33a) to follow the run of the fringe formation through the beating faces of limit stops (34a,34b) at a moving unit (35) which sets the crochet hook movement to give the undulations in the fringes as they are produced.
