Abstract (en)

[origin: WO9626094A1] A tracked long term mean value (NLM1) is generated from at least one filed long term mean value (ALM1) of a run-determining property by evaluating measurement values (MWi) obtained by measuring actual wagon runs. The substitute value (EW1) is formed in part from the filed long term mean value (ALM1) and in part from the tracked long term mean value (NLM1). The proportion (AN) of the tracked long term mean value (NLM1) is reduced with ageing.
