Abstract (en)
[origin: WO9626440A1] Specific binding materials are provided that are adapted to specifically bind with a target material characterised in that the specific binding material has areas upon its surface corresponding to the size and/or shape of the target material. Preferably the target material is a biological target material; e.g., a microorganism, antibody or antigen. Preferably the specific binding material comprises a polymeric body on which areas corresponding in size and/or shape to the target have been formed.
