Abstract (en)

[origin: EP0811406A2] The card includes one or several writable windows (11, 12), whose size and form correspond to a number block of a lottery ticket, and which are in such way imprinted, stamped or otherwise marked with the winning lottery numbers, that through lying down the card on the lottery ticket, the typed lottery numbers can be compared with drawn winning lottery numbers. An electronic or magnetic memory unit (19) is provided for a storage of data of a lottery player. Constantly used lottery numbers of the player and/or a ticket number are preferably stored in the memory unit. A bank connection of the lottery player or a credit balance at the lottery company may be stored in the memory unit, so that the lottery price is automatically billed, or a possible profit is automatically paid on a bank account of the lottery player.
