Abstract (en)

[origin: DE19506779A1] According to a process for heating a moving web, in particular a corrugated cardboard web, heat is supplied both to a first outer side of the moving web (5) and to the other outer side of said web. A pre-heater (1) with a first heating surface (3) associated to an adjustable deflection roller is linked to a second heating surface (13) linked to the deflection roller (10). The web (5) is moved over the second heating surface in contact with its second outer side.
