Abstract (en)

A domestic appliance is provided with a trolley device (18) of the kind designed for fitting in to the lower part of the frame of the appliance to facilitate the moving of such an appliance when is required, by rolling. The trolley device comprises a crown-shaped cam (28) which is rotatable supported by the lower part of the frame (10,20) of the appliance and can be rotated by the user with a lever (32) around a vertical axis. Two tilting shafts (24) are driven by the cam, each shaft having a first end (24b) adapted to cooperate with the crown shaped cam and a second end (24a) on which a wheel or roller (26) is mounted. <IMAGE>
