Abstract (en)

[origin: EP0813110A1] A graphic arts recording film is disclosed comprising a red sensitized silver halide emulsion layer and a blue coloured support, preferably a polyethylene terephthalate support. The material shows good antihalation properties and is especially suited in pre-press activity for the recording of digitally stored screened images, linework and/or text by means of red laser exposure. In a preferred embodiment a thin layer containing an antistatic compound, preferably a polythiophene, is present on the backside.
