Abstract (en)
[origin: WO9627314A1] The invention provides a display device (99) comprising a generally flat body member (1) that has a visually transparent viewing section. On the rear surface of the body member (1) are two functionally separate elements (2, 3). The first element (2) provides support for a photograph (4) to be displayed through the visually transparent section of the body member (1). The second element (3) attaches to any suitable surface to support the display device, and any photograph (4) the first element (2) may be supporting.
