Abstract (en)  
[origin: DE19624190C1] The snow plate (6) is formed as a freely rotatable wheel around the axis (1) of the stick point (12). The lower ski stick part (19) is pivotably arranged on the stick component (3) around a cross axis vertical to the axis of the stick point. The snow plate locates between a first position in which the stick point forms the extension of the stick component, forming an interlocking arrangement (17,18) and a second position in which the axis of the stick point locates crossways or vertically to the longitudinal axis (L) of the stick component. Each ski stick has a connecting component (13) formed by an extension of the stick point, along the longitudinal axis. The connecting component has a coupling piece (23) that, when in the second position, pairs with a matching coupling piece of the other ski stick of the set, forming a bayonet coupling.

Abstract (de)  
Die Erfindung bezieht sich auf ein neuartiges Skistock-Set bestehend aus wenigstens zwei Skistöcken, die ein Skistockpaar bilden und jeweils an einem Stockelement einen Griff und an einem unteren Skistockteil eine Stockspitze mit Schneeteller aufweisen. <IMAGE>
