Abstract (en)
[origin: EP0813959A1] A motor (7) for driving the cylinder (1) is arranged in the bearer tube (6) and is connected to the spindle (3). The cylinder body is pot-shaped and with its base is fixed on the head (2) of the spindle. The cylinder has a central base, with which it is fixed to the head of the spindle. The bearer tube is rotatable located in the side wall (11). The spindle is eccentrically located in the bearer tube and a positioning unit engages the bearer tube for its displacement. The driven cylinder engages the bearer tube for its displacement. The driven cylinder can be used as a transmission cylinder or as a strip transport roller.
