Abstract (en)  
The flying printing cylinder has a device to position the printing cylinder so that the cylinder bodies opposite each other adopt a roughly parallel position. This device may engage with the journals of the printing cylinders and set their turning axis on the cylinder side on each other. The journals may be in two planes, with the bearings in at least one plane able to be offset axially. The journals (78,80) may be in ball bearings (83-86). The ball bearings (85,86) of one plane may be fitted in adjustable plates (87,88).

Abstract (de)  
Damit bei gegeneinander angestellten Druckwerkzylindern sich in der Berührungszone der Zylinderkörper (79, 81) über deren Breite eine möglichst gleichmäßige Linienkraft einstellt, sind Mittel vorgesehen, die die Druckwerkzylinder derart positionieren, daß die gegeneinander angestellten Zylinderkörper (79, 81) eine annähernd parallele Lage einnehmen. <IMAGE>
