Abstract (en)

[origin: EP0814051A1] The method has a control unit for the vehicle operating drive supplying a control signal for the maximum permissible velocity of the vehicle, which is altered depending on the vehicle travel direction. The vehicle has a braked wheel axle (2) and a non-braked wheel axle (3), with the control signal allowing a higher maximum vehicle velocity when the vehicle is travelling in the direction of the braked wheel axle than in the reverse direction.
