Abstract (en)
A light apparatus having: a) a housing having a back side and a front light opening through which light can pass; b) at least one light source within the housing emitting light in a forward and a rearward direction; c) a lenticular lens sheet positioned behind the light source in the housing, the sheet having a plurality of parallel elongated, laterally convex, lens surfaces extending in a path to form a pattern geometrically following the contour of the light source, and facing the linear light source; and d) a reflecting surface behind the lens surfaces to redirect light emitted from the light source in the rearward direction to the forward direction. <IMAGE>
