Abstract (en)

[origin: EP0814571A2] The receiver has a first delay element (1) for a delayed switch-off of the radio receiver after a part of the voltage supply to the receiver is switched off. This applies particularly to the voltage part fed via the ignition switch (70) to operate the engine,. There is at least one further delay element (5). The first and the second time delay elements interrupt the current supplies to different assemblies (10,15,20,25,30,35,40,45) within the receiver, at different times, after switching off part of the voltage supply.
