Abstract (en)
[origin: GB2298868A] A detergent composition comprises a nonionic polysaccharide ether and an anionic surfactant which are in close physical proximity within the composition. The composition may be in the form of particles, granules, flakes, noodles, and extrudates. The two components may be in intimate mixture in the particles and may be separated from each other by one of the other components of the composition. The latter may be a further surfactant, builder, chelant, polymer, bleach, activator, dispersing agent or antiredeposition agent.
