Abstract (en)
[origin: FR2731724A1] A swell reducing device particularly for a so-called incident swell (1) having a given mean direction of propagation (2). Said device includes semi-submersible paddle means (8) for collecting the energy of the incident swell (1) and generating downstream from the device a forced swell that is out of phase with said incident swell, and means for holding said paddle means (8) in position relative to the mean direction of propagation of the incident swell (1) while leaving the device free to move up and down.
