Abstract (en)
[origin: WO9630812A1] The invention concerns an electrographic printing device designed for printing both sides of a web-shaped recording carrier (1). The electrographic printing device comprises a control device for the positionally accurate synchronization of the parallel course of the recording carrier webs (4, 5) between the transfer printing area (2) and fixing station (8). The parallel course is controlled by controlling the slip in the friction drive (8/1, 8/2) via a brake (7) and/or a force-adjusting mechanism acting on the pressure roller.
