Abstract (en)
[origin: WO9629720A1] In the relay an insulating wall with at least three insulating layers between the magnetic system (2, 3, 4, 16) and a voltage-conducting metal component (9) is formed in that the insulating wall consists of a wall base (18, 19) with at least one insulating gap (17) and that the insulating layer is formed in the insulating gap by means of an insulating material which is poured in in a liquid form and subsequently cured.
