Abstract (en)
[origin: EP0815959A1] A sorting unit comprises identical rectangular compartments (C1-C5) which can be arranged vertically with partitions (5) allowing the objects being sorted to be laid flat inside them, or they can be placed horizontally and divided into sections for standing the objects on their edges. Each of the compartments (C1-C5) used to construct the sorting unit has a length which is a multiple of its width. The partitions (5) have up-turned front edges to retain the objects placed into the sections, while the spacers (7) used to divide the horizontal compartments have catches (81) at the top to hold them in place. The compartments are preferably made from a synthetic material such as PVC in a dark colour.
