Abstract (en)
[origin: EP0816028A1] The method progresses the material, such as paper, foil or packing material through the machine. Cutting, perforating, crimping or embossing tools are moved across the direction of flow to process the material continuously. The processing unit (1) has a tensioned endless conveyor belt (2) with parallel sides (3). Transversely moveable processing tools (25) are positioned according to a pre-programmed control unit to operate on the continuously moving material.
