Abstract (en)

The invention relates to a process for making rotary silk screens. A parallelogram of textile material (1) is predisposed and stretched on a flat frame. The silk screen matrix is then prepared on said parallelogram. Two parallel strips are then applied on said parallelogram at a predetermined reciprocal distance. Two thin metal rods (2) are then glued on said strips. Any excess material extending beyond said rods (2) is trimmed away giving rise to a silk screen (5) which is ready to be mounted by winding about circular flanges (4) provided with cylindrical surfaces (40) arranged so that said rods (2) are singly wound about and fixed thereon. <IMAGE> <IMAGE>
