Abstract (en)

[origin: EP0816624A2] The door has a flexible door sheet wound up over a roller above the door opening and with guides at the sides. These guides can be heated. The seals are aprons(18) which lie against the sheet at a sharp angle. There are several aprons lying on each other, the ones nearer the sheet being shorter than the ones above. Warm air is used to heat the guide, there being a suction opening on the colder side of the sheet. The door has an air outlet on the warmer side. The door has a three-sided housing, preferably comprising one upper and two side "isopanel", and has a seal between the top and the winding roller.
