Abstract (en)

[origin: MX9704054A] The present invention discloses: 1. A thin wall suction tube for a combustion engine. 2.1. This type of tubes comprise a low resistance and frequently burst after combustion engine ignition. 2.2. This novel suction tube, on the contrary, is characterized in that an aperture (2) is disposed on the suction tube (1), downstream a butterfly valve reactor, said orifice (2) conducting to the atmosphere and being governed by a valve (3), which responds to pressure on said suction tube (1). 2.3. The novel suction tube can be useful for vehicles combustion engines. 3. Drawing.
