Abstract (en)
[origin: EP0816691A2] The stop valve has in its body an auxiliary valve also blocking in the back flow direction, which is opened for introduction of user channel unloading via thruster operated from the longitudinal slider. In or on the stop valve body (41) a pressure limiting valve is arranged, which opens in the back flow direction (9). The stop valve is arranged within its housing (11) in the area of a user connection (25). The pressure limiting valve is arranged within the stop valve body parallel next to the auxiliary valve. It incorporates as additional components at least one valve body and a mechanical spring component tensioned by a pressure limiting screw.
