Abstract (en)

[origin: EP0816768A2] The ventilator device (5) is positioned in a passage aperture (4) in a wall, roof, etc. and has a blower respectively ventilator (8). The blower or ventilator, or an associated carrier, are fastened to the pivoted flap (7) and to the component (2) with the aperture, so as to be movable about joints (9,10) extending parallel to the flap axis (6). When the flap moves into opening position, the blower or ventilator moves into upright position with it. It may be lowered into or under the passage, when the flap closes.
