Abstract (en)
[origin: WO9629921A1] A foamed soap dispenser has metering pump for a soap solution in a reservoir and an air pump to convey foaming air. The two pumps (4, 8) have mutually parallel pistons (5, 9). Both pumps can be operated together and simultaneously by means of an operating lever formed by the housing cover (2) movable in the direction of travel of the two pistons (5, 9). The air pump (8) is preferably fitted between the reservoir (15) to the metering pump (4). A connecting pipe (12) from the reservoir (15) to the metering pump (4) forms a stop for the piston (9) of the air pump (8).
