Abstract (en)

[origin: DE19602587A1] In a tennis racquet with a frame (1) forming the striking head and a tensioning system consisting of crossed strings, where the strings (7) are secured by being passed through apertures in a frame component (2) and a component supported by said component (2), and where at least one securing device for at least one string (7) is designed in such a way that said string (7) can move on the inside of the frame in a direction perpendicular to the tension plane formed by the tensioning system, at least one dimensionally stable component (10) surrounding the movable string (7) like a sleeve can move to a limited extent in relation to the frame section (2) radially to the longitudinal axis of the string (7) and is supported on a body (12) which is arranged in a recess in the frame section (2) and is made of an elastomeric material which can be deformed by a movement of the component (10).
