Abstract (en)

[origin: WO9630601A1] A transportable building system includes a cargo shipping container (10) and a plurality of components (20, 22) carried in or on the container, or forming part of the container. The components may be rearranged and/or interconnected to provide a structure incorporating the container. These components include structural members (34, 36) adapted to be stored within the container during transport but to be fastened to the container in the erected structure so as to project from the container. The respective structural members when so fastened form load bearing frame components (34, 36) of the structure for supporting further components above the container.
