Abstract (en)  
[origin: EP0818157A1] The sports boot has a sole (3), which is joined to an article of sports equipment such as a ski or skate, and an upper (7) in two sections (7A,7B). The first section (7A) is made from a relatively rigid material, e.g. a plastic, and forms a cradle (13) for the heel. It is joined to the sole of the boot in the heel zone. The second section (7B) of the upper is made from a relatively supple material covering the forward part of the foot and attached to the front end of the sole and to the sides (13a) of the rigid rear section, e.g. by rivets (14) or stitches. The supple forward section of the upper has apertures (15) in its sides to provide aeration and greater suppleness. The sections of the upper between the aperture form tongues (16) which are connected to the rear rigid section and the sole. The top portion of the upper's forward section has a central lengthwise aperture (17) forming two side flaps with fastenings (18) to grip the foot after insertion.
