Abstract (en)

[origin: EP0818797A1] The single face input and output method forms part of the modular electrical equipment (10). One side of the face (12) has holes (13N,13P) to access input connectors, whilst the other side has holes (15N,15P) to access output connectors. The input and output holes are separated by a partition wall (43), extending between the connection holes. Connection rails have protruding prongs which push into the holes, connecting to a feed rail which can pass above the partition wall.
