Abstract (en)
[origin: WO9627320A1] A device for emptying trays from waste, incorporating a sloping track (7) provided with pairs of cooperating carriers (9), adapted to retain a tray (2) at the edge region thereof, with the plane of the tray under an angle to the extension of the track, and wherein the carriers (9) are movable synchronously from a lower position in which the tray (2) is insertable into said carriers (9) to an upper position, in which the carriers (9) are arranged automatically to release the tray, which during the sloping transport, substantially due to the gravity, has been emptied from waste.
